Sequence 17, Application US/09270957

Patent No. 6641996

GENERAL INFORMATION:

APPLICANT: Richard A. Jefferson and Jorge E. Mayer

TITLE OF INVENTION: MICROBIAL -GLUCURONIDASE GENES, GE

TITLE OF INVENTION: PRODUCTS, AND USES THEREOF

FILE REFERENCE: 190106.405C1

CURRENT APPLICATION NUMBER: US/09/270,957

CURRENT FILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 112

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 17

LENGTH: 603
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ; TYPE: PRT ; ORGANISM: Escherichia US-09-270-957-17

Sequence 20, Application US/10757093

Publication No. US20050153448A1

GENERAL INFORMATION:
APPLICANT: CAMBIA
ITITLE OF INVENTION: Fungal beta-glucuronidase genes and
FILE REFERENCE: 415

CURRENT APPLICATION NUMBER: US/10/757,093

CURRENT FILING DATE: 2004-01-14

NUMBER OF SEQ ID NOS: 37

SOFTWARE: Patentin version 3.2

SEQ ID NO 20
LENGTH: 563

TYPE: PRT
ORGANISM: Thermotoga maritima

                                                                                                                                                                                                                                                                           Hawrence Berkeley National Laboratory
Berkeley, CA 94720
This clone was sequenced as part of a high-throughput process to sequence clones from Drosophila Gene Collection 1 (Rubin et al., Science 2000). The sequence has been subjected to integrity checks for sequence accuracy, presence of a polyA tail and contiguity within 100 kb in the genome. Thus we believe the sequence to reflect accurately this particular cDNA clone. However, there are artifacts associated with the generation of cDNA clones that may have not been detected in our initial analyses such as internal priming, priming from contaminating genomic DNA, retained introns due to reverse transcription of unspliced precursor RNAs, and reverse transcriptase errors that result in single base changes. For further information about this sequence, including its location and relationship to other sequences, please visit our Web site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1647

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1394
                                                                                                                                                                                                                                                                                 Original source text: Human fibroblasts cDNA clone pHUGF and placenta cDNA clones pHUGP13 and pHUGP15.

Draft entry and copy of computer-readable sequence of [1] kindly provided by R.D.Miller, 08-MAY-1987.

Four potential N-linked glycosylation sites are located at bases 543-551, 840-848, 1284-1292 and 1917-1925. Potential poly-A signals were found 25 and 48 bp upstream of the poly-A site at nucleotides 2139-2144 and 2162-2167 respectively.

Two types of mRNA exit due to alternative splicing. The short form, lacking bases 939-1091 below, encodes a protein lacking beta-glucuronidase activity.
